

Durabar® is an engineered yieldable tendon capable of providing effective support in areas with swelling ground and areas prone to seismic activity. A risk assessment done by SRK Consulting indicates that financial and safety risks should decrease one hundred fold when using yieldable Durabar® instead of rebar as support under similar circumstances.

ADVANTAGES

- High ability to dissipate kinetic energy
- Yields at constant load
- High rates of energy dissipation
- Exceptional displacement range
- Very stiff in static conditions
- Least vulnerable to shear failure
- Debonding coating inhibits corrosion
- Easy to install
- No special training needed for existing crews
